Education

Addis Ababa University

Bachelor of Science in Computer Science

- Current GPA: 3.96 / 4.00

Sep. 2023 – Present

Addis Ababa, Ethiopia

Relevant Coursework

- Data Structures
- Object Oriented Programming
- Web Application
- Software Engineering
- Algorithms Analysis
- Database Management
- Artificial Intelligence
- Internet Technology
- Computer Architecture

Summary

- Full-Stack Developer skilled in JavaScript, Python, React.js, Next.js, Node.js (Express), TypeScript, and Tailwind and PostgreSQL , with expertise in building responsive web applications and portals. Experienced in REST API integrations and training machine learning models for predictive analytics. Passionate about developing scalable, user-focused solutions and continuously improving technical skills.

Technical Skills

- | | | | | | | | | | |
|--------------------|---|-------------------|---|--------------------|---|-----------------|---|---------------------------|------------------------------|
| • Frontend: | TypeScript,
HTML, CSS,
JavaScript,
React.js,
Next.js, | • Backend: | Node.js,
Express,
Python,
REST API | • Database: | PostgreSQL,
MySQL,
WampServer,
MongoDB | • Tools: | Git,
VSCode,
Jupyter,
Postman,
Vercel, Docker | • Other Languages: | C++, Java,
C# (.NET Core) |
|--------------------|---|-------------------|---|--------------------|---|-----------------|---|---------------------------|------------------------------|

Experience

Software Company

Dec 2025 – Present

Portal Developer Intern

Addis Ababa, Ethiopia

- * Developing the Brana-Global mobile and web portal using React.js (Next.js) with TypeScript and Tailwind CSS, implementing responsive UI and interactive dashboards.
- * Translated product requirements and technical specifications into functional designs and reusable components, ensuring alignment with Product goals.
- * Contributed to backend integration with NestJS APIs and Postgres database for authentication, user data, and transaction flows.
- * Collaborated with cross-functional team members to ensure seamless feature delivery, performing code reviews, testing, and iterative improvements.
- * Implemented reusable UI components and state management solutions to support wallet balances, KYC status, deposits, withdrawals, and internal transfers.

DevTech

Sep 2025 – Oct 2025

Machine Learning Intern (Virtual)

Adama, Ethiopia

- Developed and trained machine learning models to predict house prices and other relevant datasets using Python and libraries including NumPy, Pandas, Scikit-learn, and Matplotlib for data preprocessing, analysis, and visualization.
- Implemented model evaluation techniques including train/test splits, cross-validation, and performance metrics to ensure accurate predictions.
- Built interactive Jupyter notebooks to document experiments, visualize results, and share findings with team members in a remote collaboration setting.
- Applied data cleaning, feature engineering, and exploratory data analysis (EDA) to enhance model performance and reliability.
- Collaborated virtually using Git for version control and team coordination, ensuring reproducible code and proper documentation.

Projects

Gym Reservation Bot | *Python, Selenium, Google Cloud Console*

January 2021

- * Developed an automatic bot using Python and Google Cloud Console to register myself for a timeslot at my school gym.
- * Implemented Selenium to create an instance of Chrome in order to interact with the correct elements of the web page.
- * Created a Linux virtual machine to run on Google Cloud so that the program is able to run everyday from the cloud.
- * Used Cron to schedule the program to execute automatically at 11 AM every morning so a reservation is made for me.

Ticket Price Calculator App | *Java, Android Studio*

November 2020

- * Created an Android application using Java and Android Studio to calculate ticket prices for trips to museums in NYC.
- * Processed user inputted information in the back-end of the app to return a subtotal price based on the tickets selected.
- * Utilized the layout editor to create a UI for the application in order to allow different scenes to interact with each other.

Transaction Management GUI | *Java, Eclipse, JavaFX*

October 2020

- * Designed a sample banking transaction system using Java to simulate the common functions of using a bank account.
- * Used JavaFX to create a GUI that supports actions such as creating an account, deposit, withdraw, list all accounts, etc.
- * Implemented object-oriented programming practices such as inheritance to create different account types and databases.

Extracurriculars & Certifications

Hackathon Participation

2025

Team Participant

- * Participated in ALX national Competitive Programming Hackathon, contributing to Algorithm development and collaborative problem-solving.

Life Transformation Training Program

Mar 2025 – Apr 2025

Participant

- * Completed a 4-week intensive program focused on health, communication, and essential soft skills.

Coursera / DeepLearning.AI

Jul 2025

Certificate: Supervised Machine Learning

- * Completed Andrew Ng's course on Regression and Classification using Python.
